

Un moteur électrique (puissance 500 W, vitesse de rotation 1500 tours / min), entraîne un système roue et vis (2 filets / Z2.1 = 60 dents). Celui-ci entraîne un système poulie-courroie (d2.2 = 30 mm, d3.1 = 100mm) solidaire d'un train d'engrenages (Z3.2 = 30 dents, Z4.1 = 50 dents, Z4.2 = 15 dents, Z5 = 50 dents, Z6 = 80 dents).

$P = m \cdot g$
 $m = \frac{P}{g}$

1/5

$$Z = \frac{2 \cdot 30 \cdot 30 \cdot 15 \cdot 50}{60 \cdot 100 \cdot 50 \cdot 50 \cdot 80} \approx \frac{1}{889}$$

$$P_1 = G_1 \cdot w_1 \quad G_1 = \frac{P_1}{w_1}$$

$$Z = \frac{N_6}{N_1}$$

$$N_6 = Z \cdot N_1$$

$$N_6 = \frac{1}{889} \cdot 1500 \approx 1,69 \text{ tr/min}$$

$$w_1 = \frac{11 N_1}{30} = \frac{11 \cdot 1500}{30} \approx 157 \text{ rad/s}$$

$$G_1 = \frac{500}{157} \approx 3,18 \text{ N.m}$$

$$\rightarrow 0,318 \text{ kg.m}$$

$$\eta_{\text{global}} = 0,8^3 \cdot 0,85 \cdot 0,6 \approx 0,459 \approx 45,9\% \\ \approx 0,372 \approx 37,2\%$$

$$\eta_g = \frac{P_6}{P_1}$$

$$P_6 = \eta_g \cdot P_1$$

$$= 0,459 \cdot 500 \approx 230 \text{ kW}$$

$$P_6 = \gamma_6 \cdot \omega_6$$

$$\gamma_6 = \frac{P_6}{\omega_6}$$

$$\gamma_6 = \frac{230}{\left(\frac{\pi \cdot 1,69}{30}\right)} \approx 1296 \text{ N/m}$$

$$V_t = \omega_6 \cdot R_t$$

$$V_t = \left(\frac{\pi \cdot 1,69}{30}\right) \cdot \frac{200 \cdot 10^{-3}}{2} \approx 0,018 \text{ m/s}$$

$$\text{si } P_t = P_6 : P_t = F_t \cdot V_t$$

$$F_t = \frac{P_t}{V_t}$$

$$F_t = \frac{230}{0,018} \approx 13000 \text{ N}$$

↗ correspond à 1300 kg = 13 T
