

Calculer $\|\vec{C}\|$ à la limite de l'adhérence
sachant que $f_s \text{ bois/bois} \approx 0,65$

$$\vec{C}_{2 \rightarrow 1} = \begin{pmatrix} X_c \\ 0 \\ 0 \end{pmatrix} \quad \vec{G}_{p \rightarrow 1} = \begin{pmatrix} 0 \\ -1000 \\ 0 \end{pmatrix} \quad \vec{A}_{0 \rightarrow 1} = \begin{pmatrix} -T \\ N \\ 0 \end{pmatrix} \quad \text{avec } T = \sum_s N_s$$

Calcul à
la limite
d'adhérence

$$\begin{array}{l} \text{PFS} \\ \sum \vec{F} \cdot \vec{z} = 0: X_c - T = 0 \quad (1) \\ \sum \vec{F} \cdot \vec{y} = 0: -1000 + N = 0 \quad (2) \end{array} \quad \left| \quad \begin{array}{l} (2) \quad N = 1000 \\ (3) \quad T = 0,65 \cdot 1000 = 650 \end{array} \right. \quad \begin{array}{l} (1) \quad X_c = 650 \end{array}$$

A la limite au basculement: $\vec{C} \begin{pmatrix} X_c \\ 0 \\ 0 \end{pmatrix} \quad \vec{G}_{p \rightarrow 1} \begin{pmatrix} 0 \\ -1000 \\ 0 \end{pmatrix} \quad \vec{A}_{0 \rightarrow 1} \begin{pmatrix} -T \\ N \\ 0 \end{pmatrix}$

$$\sum \vec{M}_A \vec{F} \cdot \vec{z} = 0: -X_c \cdot 1 + 1000 \cdot 0,6 = 0$$

$$X_c = 600$$

SI: Piano $f_s \text{ acier/brais} = 0,5$

Maire piano: 140 kg

2/3

exprimer $C = f(a)$ pour
les deux cas suivant:

- à la limite au glissement.
- à la limite au basculement.

BAME:

$$\vec{C}_{2 \rightarrow 1} = \begin{pmatrix} X_c \\ 0 \\ 0 \end{pmatrix} \quad \vec{G}_{p \rightarrow 1} = \begin{pmatrix} 0 \\ -1400 \\ 0 \end{pmatrix} \quad \vec{A}_{0 \rightarrow 1} = \begin{pmatrix} -T \\ N \\ 0 \end{pmatrix}$$

avec $T = f \cdot N$

limite au glissement

$$\text{PFS: } \begin{cases} \sum \vec{F} \cdot \vec{x} = 0: X_c - T = 0 \\ \sum \vec{F} \cdot \vec{y} = 0: -1400 + N = 0 \end{cases}$$

$N = 1400$

$X_c = T = f \cdot N = 0,5 \cdot 1400 = 700$

limite au basculement

$$\begin{cases} \sum \vec{M}_A \vec{F} \cdot \vec{z} = 0: -X_c \cdot a + 1400 \cdot \frac{1,9}{2} = 0 \end{cases} \quad X_c = \frac{1400 \cdot 1,9}{2 \cdot a}$$

$X_c = \frac{1330}{a}$

$$\begin{aligned} \text{limite au glissement} & \left(\begin{aligned} \sum \vec{F} \cdot \vec{x} = 0: X_C - T = 0 \\ \sum \vec{F} \cdot \vec{y} = 0: -1400 + N = 0 \end{aligned} \right) \left. \begin{aligned} N = 1400 \\ X_C = T = f \cdot N = 0,5 \cdot 1400 = 700 \end{aligned} \right\} \\ \text{limite au basculement} & \left(\sum M_A \vec{F} \cdot \vec{z} = 0: -X_C \cdot a + 1400 \cdot \frac{1,9}{2} = 0 \right) \left. \begin{aligned} X_C = \frac{1400 \cdot 1,9}{2 \cdot a} \\ X_C = \frac{1330}{a} \end{aligned} \right\}
\end{aligned}$$

$$y = a$$

3/3

$$y = \frac{1}{x}$$
